

Call for Participation
6th mmW RCN Workshop
NSF Research Coordination Network on Millimeter Wave Wireless
National Institute of Standards and Technology
Boulder, CO
July 23-24, 2019
<https://mmwrcn.ece.wisc.edu>

Millimeter-wave (mmW) wireless is the focus of intense current research in academia and industry for achieving multi-Gigabit data rates and low latency as part of the emerging vision for 5G wireless networks and beyond. This NSF-sponsored research coordination network (RCN) aims to spur research and development of mmW wireless, driven by innovations in three key areas:

- 1) CSP: communication and signal processing techniques;
- 2) HW: mmW hardware, circuits, antennas, and digital hardware; and
- 3) NET: wireless networking;

along with mmW prototypes and testbeds. The RCN aims to engage academic and industrial researchers as well as stakeholders from the US government agencies to facilitate cross-fertilization of ideas, identification of challenges and strategies to address them, and to guide the development of mmW wireless technology and standards. The RCN is led by the University of Wisconsin and includes a steering committee of sixteen leading researchers in the area of mmW wireless technology from academia and industry, including international representatives.

Sixth RCN Workshop: A key mechanism for interaction between RCN members and participants from the wider mmW research community is through two workshops each year. The [kickoff workshop](#), held in Dec 2016, generated several exciting ideas for cross-disciplinary collaborations. The [second workshop](#), held in July 2017, further developed the research and technology roadmap at the intersection of HW-CSP and CSP-NET areas, and prototypes and testbeds. The [third workshop](#) continued the development of research ideas at the two interfaces, and also included a very fruitful discussion of synergistic opportunities at the Interface of 802.11ad/ay and 5G New Radio (NR) standards. Building on the momentum, the [4th workshop](#) explored the development of community testbeds for research and experimentation, as well as circuits, antennas, and prototypes. The [5th workshop](#) further developed the theme of community testbeds. The 6th workshop at NIST will continue to explore the RCN research themes, including:

- Research ideas and demonstration concepts at the interface of CSP-HW and CSP-NET areas, including new channel and measurement models.
- Integration of channel models into system-level and network-level design and simulation.
- Combining measurements and ray tracing for accurate channel models.
- Research issues driven by mmW standards, including 5G NR (new radio), WiGig, and 802.11ay.
- Spectrum sensing, sharing, and access issues.
- Innovations in prototype and testbed development (especially lower cost approaches).
- Research ideas and challenges for mmW wireless at frequencies above 40 GHz (40-300GHz).
- The role of machine learning techniques in system design and optimization.
- System- and network-level analysis of integrated fixed wireless, backhaul, and access networks.
- New and emerging use cases, including AR/VR, vehicular networks, and drone-based networks.
- Synergistic approaches from other applications such as imaging, radar and sensing.
- “Moonshot” problems (5-year and 10-year timeframe) for active academic-industrial collaboration.

Participation & White Papers: Prospective participants are invited to submit a **one-page white paper** outlining their research plans and/or demonstration concepts relevant to mmW wireless, including a brief

Call for Participation
6th mmW RCN Workshop
NSF Research Coordination Network on Millimeter Wave Wireless
National Institute of Standards and Technology
Boulder, CO
July 23-24, 2019
<https://mmwrcn.ece.wisc.edu>

description of their background in the area. Accepted white papers will be presented as posters and/or demos at the workshop. The authors are encouraged to consult the agenda, posters and reports from the previews workshops at https://mmwrcn.ece.wisc.edu/?page_id=4. The white papers must include:

1. tentative poster/demo title,
2. list of authors (including a statement on who is the contact author), and
3. email addresses and affiliations of authors.

The one-page white papers should be submitted in **pdf format** to mmwrcn@ece.wisc.edu. Please use the following format for the white paper filename: **lastname_firstname_rcn6.pdf (contact author)**. Postdoctoral and early-career researchers as well as researchers from under-represented groups are strongly encouraged. Limited funding is available to support the travel cost of senior academic researchers, including a few international participants, for selected white papers. **Please indicate in your white paper if you will be unable to attend without travel support. If you are requesting travel support, indicate the name of the author who will be receiving the travel support (one per white paper submission)**. Participants without white papers, especially from industry, are encouraged to attend, subject to space availability. Please see the workshop page for registration information; https://mmwrcnece.wiscweb.wisc.edu/?page_id=1813.

Important Deadlines:

May 10, 2019: one-page white paper submission (please follow the submission instructions)

May 24, 2019: notification of white paper selection

May 31, 2019: workshop registration deadline (for accepted white papers)

June 14, 2019: travel (air and hotel) reservation deadline (for attendees with RCN travel support)

July 14, 2019: registration closes

Organizers:

Kate Remley, NIST; kate.remley@nist.gov

Jeanne Quimby, NIST; jeanne.quimby@nist.gov

Parmesh Ramanathan, UW-Madison; parmesh.ramanathan@wisc.edu

Ismail Guvenc; iguenc@ncsu.edu
